Ultimate Homeworker

PRODUCT SPEC

SD-WAN homeworker connectivity with QoS

What is Ultimate Homeworker?

This is the SD-WAN homeworker solution, delivering an all-in-one device that aggregates broadband or fibre connections with 4G mobile to keep your workers working.

Ultimate Homeworker integrates with your corporate WAN/VPN and prioritises VoIP/video conferencing systems over home traffic, such as Netflix and gaming.

Designed from the ground up to ensure hassle-free plug-in of broadband router, firewall, 4G and Wi-Fi, all in a single integrated unit.

A unique all-in-one platform for enterprise homeworkers.

Homeworkers need to stay online and be able to use their business systems and communication tools effectively, all the time

Contention-free broadband + 4G included

Fibre to the Cabinet (FTTC) or full Fibre to the Premises (FTTP) + 4G mobile service. Unlimited data, zero-contention, fault tolerant and fully managed end to end.

Business apps get priority

Ensure Zoom calls, Teams meetings, VoIP or any critical business systems are not compromised by other traffic such as Netflix or online gaming. Quality of Service works at the packet level to ensure the systems that are important to your homeworkers take priority over non-work traffic.

Eliminate downtime

Seamlessly keep users online even in the event of a total broadband outage. Eliminate dropped calls and sessions, and ride out broadband faults that could normally keep users offline for hours or days.

One box

Eliminate the need for extra devices. Integrated broadband, 4G, firewall and Wi-Fi on a fanless device. Industrial grade, quick and easy to deploy and built to last.

Full feature list

- Contention-free managed broadband or FTTP links
- Seamless 4G failover to eliminate interruptions and downtime
- Carrier independent for maximum resilience
- Bi-directional QoS to prioritise corporate traffic over home use
- UK support 24/7
- Upgrade path for power users
- 24/7 monitoring & portal for corporate IT
- Integrates with WAN and supports VPN
- Built in Wi-Fi
- Built in firewall

Easy to support

Every device is monitored by sophisticated systems every second of every day, with data fed back to a portal enabling 1st line support engineers to see live uptime and traffic flow. Bespoke data feeds can integrate with corporate systems to deliver a fully integrated homeworker support service.
